

MINIMALLY INVASIVE APPROACH NOW AVAILABLE

Sinus Sufferers Find Relief

SINUSITIS: A COMMON PROBLEM

Sinusitis affects 37 million people each year, making it one of the most common health problems in the U.S. It is more prevalent than arthritis and hypertension and has a greater impact on quality of life than diabetes or congestive heart failure. Symptoms may significantly affect people physically, functionally, and emotionally.

A NEW DEVICE TECHNOLOGY MAY GIVE YOU RELIEF

Balloon Sinuplasty™ technology is a new minimally invasive option in sinus surgery. Now relief for your chronic sinusitis symptoms is only an inflation away.

- REDUCED BLEEDING • LESS PAIN
- MINIMALLY INVASIVE
- DOES NOT LIMIT TREATMENT OPTIONS
- RECOVERY IN AS LITTLE AS TWO DAYS

WHAT ARE THE SINUSES?

Sinuses are air-filled pockets in the areas surrounding the nose. There are four groups of sinuses on either side of the face.

WHAT IS SINUSITIS? Sinusitis is an inflammation of the sinus lining tissue caused by bacterial, viral or fungal infections. Allergies may also contribute to sinusitis. When there are anatomic obstructions, or when the sinus openings swell shut, normal mucous drainage is blocked and infection and inflammation develop within the sinus.

DR. DUANE J. TAYLOR, MD NASAL & SINUS SPECIALIST

He performs three types of nasal surgery: functional, reconstructive and cosmetic.

An expert in endoscopic sinus surgery, Dr. Taylor is a nationally recognized expert in Balloon Sinuplasty technology. He uses a small, flexible, balloon catheter to open blocked sinus passageways, restoring normal sinus drainage and function with minimal tissue removal.
